

Color Guide

A simple guide to the colors used, and what each one means.

1. Primary & Secondary Colors

These are the main colors used across the app for buttons, links, and highlights.

Primary Color — Blue

Blue is our main color. It is used for links, buttons, and important actions.

Blue
#2AA9E0

Secondary Colors

These extra colors are used for special tags and labels, mostly in the clinic admin screens.

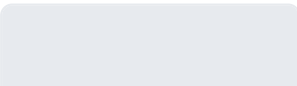

Button Blue
#2563EB

Neutral Colors

Grays are used for backgrounds, borders, and regular text that isn't a color status.

Page Background
#F4F7FA

Border Gray
#E7EAEE

Body Text
#57626D

Mid Gray
#9AA5B1

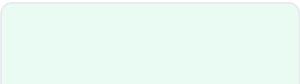

Dark Text
#1B2430

2. Semantic Colors

Semantic colors have a fixed meaning everywhere in the app. Green always means "good," orange/amber always means "warning," maroon always means "error," red always means "critical/priority," and so on. Each color has three versions: a solid color (for icons and dots), a text color (easier to read), and a light background (for badges).

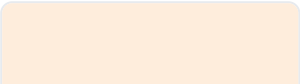

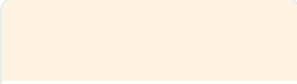

Green — Good / Success

Green means everything is fine: data is complete, a task is done, or the answer is "Yes."

 Green #3FBE84	 Green Text #15803D	 Green Background #EAFBF3
--	---	--

Orange / Amber — Warning

Orange and amber mean something needs attention: data is low, a dose was missed, or the answer is "No."

 Orange #F2994A	 Orange Text #C25E00	 Orange Background #FEEDDC	 Amber #F59E0B
 Amber Text #B45309	 Amber Background #FEF3E1		

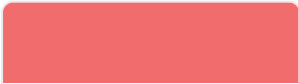

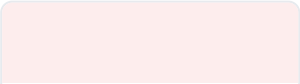

Maroon — Error

Maroon means something is wrong: a system error, a failed action, or invalid input. It's a deep, muted red — distinct from Priority Red and from the Orange/Amber warning tones — so an error never gets mistaken for a critical patient or a simple warning.

 Maroon #9F1C3B	 Maroon Text #7A0F2B	 Maroon Background #FCE8EC
---	--	---

Red — Priority / Critical

Red is reserved for patient priority: a critical alert or a high-priority patient. It is not used for system errors.

 Red #F16C6C	 Red Text #D92D20	 Red Background #FDEDED
--	---	--

Yellow — Medium Caution

Yellow sits between orange and gray. It marks things that are medium priority — not urgent, but not fine either.

Yellow
#D9A404

Yellow Text
#7A5F00

Yellow Background
#FEF8DC

Gray — Disabled / Not Available

Gray means something is turned off, not filled in, or not clickable.

Disabled Border
#E7EAE

Disabled Text
#8D929A

Disabled Input Text
#9AA5B1

3. Badges & Status Pills

Badges and status pills are the small rounded labels that show a patient’s or task’s status at a glance. They use a light background color with matching darker text from the semantic colors above.

Active / Completed / Healthy

Pending / In Progress

Critical / Priority

Error

Medium Priority

Low Priority / Archived

Escalated

Color	Status	What it means
	Active / Completed / Healthy	Green background, green text. Everything is good.
	Pending / In Progress	Orange-tinted background, orange text. Waiting or needs action.
	Critical / Priority	Red background, red text. A high-priority or critical patient. Reserved for priority — not used for errors.
	Error	Maroon background, maroon text. A system error or failed action.
	Medium Priority	Yellow background, yellow text. Somewhat important.
	Low Priority / Archived	Light gray background, gray text. Not urgent.
	Escalated	Red background, red text. Sent to a higher level — treated as urgent, same as Critical/Priority.

Quick rule of thumb: green = good, orange/amber = warning, maroon = error, red = priority/critical, yellow = medium, gray = low or inactive.
